

Quick fixing system for panels and anti-theft devices

The clamps, make it possible to place photovoltaic panels on fixed structures or trackers much more quickly and easily than with bolts or any other kind of fixing.

4 or 6 pieces are enough for each panel.

They are held firmly. We do not know of any of the 100,000 clamps on many installations all round the world coming loose.

When the whole installation is complete, the head is cut off the screw holding it with a pair of pliers, which means it cannot be taken out except by cutting the whole piece.

This makes it practically impossible to steal the panels. Noisy tools and a great deal of time are needed for each panel. It is also a reversible system, if you want to remove the panels, this can be done with a little patience.

If this system is also combined with our anti-theft alarm, security is almost total.

If a solar plant with many panels is to be assembled, a piece of equipment for drill assembly can be supplied to help fix the pieces quickly.
